

SUMIT VIKRAM

✉ sumitvikram22182018@gmail.com |  github.com/vikramsumit |  linkedin.com/in/isumitvikram | 

PROFILE SUMMARY

B. Tech student with hands-on experience in Software Development, Data Science, AI/ML, and MERN Stack development. Strong foundation in DSA and building scalable real-world applications.

ACADEMIC QUALIFICATION

B. Tech in Information Technology	8.04/10
<i>Maulana Abul Kalam Azad University of Technology, WB</i>	2024 – 2027
Diploma in Computer Science & Engineering	8.15/10
<i>New Government Polytechnic, Patna - 13</i>	2021 – 2024
CBSE X Cambridge School, Nalanda	87.6%

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C

Data Science & ML: Machine learning, Feature Engineering, Model Deployment, ETL Pipelines

Generative & Agentic AI: Prompt Engineering, LLM Workflows, AI Automation

Web & Backend: React.js, Next.js, Node.js, Express.js, Flask, REST API, JWT Auth, Tailwind, SQL, MongoDB

Tools & Platforms: Git, GitHub, Linux, Google Collab, Figma(basics), Canva

INTERNSHIP EXPERIENCE

CSRBOX – AICTE | AI Strategy & Business Intelligence (Virtual) Mar 2026 – Apr 2026

Major Project — AI Hospital Receptionist Agent (n8n)

- Built an AI-powered n8n workflow for patient triage, disease classification, doctor allocation, and ward recommendations.

Minor Project — Email Automation System (Relay)

- Built an automated email reply system using Relay and LLM-powered workflows.

Labmentix | Data Science & AIML

Sep 2025 - Nov 2025

Major Project — Integrated Retail Analytics for Store Optimization

- Led analysis of 421,000+ sales records across 45 stores and 99 departments; engineered 15+ temporal and business features and handled 50%+ missing promotional data.
- Built and compared 6 ML models (Random Forest, Gradient Boosting, Linear/Ridge/Lasso), achieved 95%+ R^2 tuned with Grid Search CV and deployed a production-ready model.
- Identified key sales drivers: seasonal patterns, holiday effects (15%+ sales lift), and promotional effectiveness.
- Created 15+ interactive visualizations to highlight department performance gaps and store efficiency opportunities.

PROJECTS

Plant Disease Detection System – Web

Nov-2025

- Upgraded to a 9-plant two-stage pipeline (plant identifier → disease classifier) using TensorFlow/Keras trained on ~150k images (~1M+ with augmentation); achieved ~97.7% confidence.
- Built an Express.js REST API backend serving model predictions; integrated with a React + Vite web frontend for real-time disease detection.
- Finalist — CICPS Hackathon** organized by Jadavpur University, Calcutta University & GCECT.
